

MGS60 - FM-plug4+

INSTALLATION

Updated: 190128 1310

The FM-plug4+ is a compact GPS tracker, designed to be installed in the OBD-II service connector.

**OBD-II
service connector**

The OBD-II service connector, can be different colors like for example black, yellow, pink or white.

It is typically found in left site of the vehicle, close to clutch pedal or fuses. It can be hidden behind a panel door.

If the GPS tracker disturbs the driver, when inserted into the OBD-II service connector, then an extension cable can be used to move the tracker to a better location.

Alternatively we offer an OBD-cigarette cable, that makes it possible to power the GPS tracker from the cigarette power outlet.

Please be advised that the cigarette power outlet often turns off, when vehicle ignition is turned off, which means that the tracker will need to spend a couple of minutes to find new satellite fix, next time engine is started.
